Mayank Kashyap

ML Engineer

kashyapmayank2021@gmail.com +91-8077089908 Clement town, Dehradun mkashyap09 mayankkashyap09

Academic Details

Computer Science Engineering 2022 – 2026
Graphic Era Hill University, Dehradun Dehradun

Intermediate (CBSE) 2022
Himalayan progressive school, kichha Kichha

High School (CBSE) 2020
Himalayan progressive school, kichha Kichha

Technical Skills

Programming languages
Python , C++, Sql , Excel.

AI & Machine Learning
Machine Learning, Deep Learning, Supervised & Unsupervised Learning, Model Training & Evaluation, Feature Engineering, Natural Language Processing (NLP), Computer Vision

AI/ML Libraries & Frameworks
Scikit-Learn, NumPy, Pandas, Matplotlib, Seaborn, Plotly, Tensorflow, Pytorch.

Generative AI & LLMs
Generative AI, Large Language Models (LLMs), Prompt Engineering, RAG, Embeddings, Vector Databases, AI APIs.

Databases & Tools
MySQL, MongoDB, Git, GitHub, Jupyter Notebook, VS Code, Google Collab, Kaggle.

Certifications

Training on Application Development Using Android
Graphic Era Hill University, May 2024

Claude code 101 by anthropic
2026

Extracurricular Activities

- Attended Amazon AWS workshop organized by Graphic Era Hill University
- Volunteered in AIESAC
- Participated in technical workshops and activities related to Artificial Intelligence, Machine Learning and Cloud Computing
- Actively explored AI/ML projects, Python programming and emerging Generative AI technologies

Projects

Mental Health Prediction & Student Wellbeing | Python, Scikit-learn, Pandas, Render 10/2026 – 10/2026

- Built an **end-to-end ML** classification pipeline for predicting student wellbeing/mental health risk, including Model Deployment, Model Evaluation, Feature Engineering ,data preprocessing, Encoding, Scaling, and Model Selection.
- Compared multiple classification models using **Precision, Recall, F1-Score, Accuracy, and Confusion Matrix** and integrated the best-performing model into the application.
- Built REST API's endpoints using **FastAPI**, **Pydantic** to connect the trained ML model with the frontend.
- Developed an interactive web interface using **HTML, CSS, and JavaScript** with AI-assisted development, and deployed the application on **Render**.

Heart Disease Prediction using Machine Learning | Python, Pandas, Scikit-learn, Seaborn, Matplotlib

- Developed and compared five classification models, including **Logistic Regression, KNN, Gaussian Naive Bayes, Decision Tree, and SVM**, to predict heart disease from clinical data.
- Built a preprocessing pipeline incorporating missing-value imputation, categorical encoding, and feature scaling to prevent data leakage.
- Evaluated model performance using **accuracy, precision, recall, F1-score**, and confusion matrices.
- Used stratified train/test **splitting and cross-validation** to support model comparison and selection.

Hobbies

Exploring Artificial Intelligence & Emerging Technologies | Reading AI/ML Articles & Research
